

helm-omneon

Using Helm with Omneon Video Servers

Omneon Spectrum and MediaDeck servers are some of the best known and most robust video servers on the market today. Helm panels can control playout functions on these units via Ethernet, including features such as looped and bounce playback.

Because Helm uses the Omneon API for control, it can work alongside existing station automation systems or other hardware control panels. Helm can display current playout clip and timecode even when used with third-party systems.

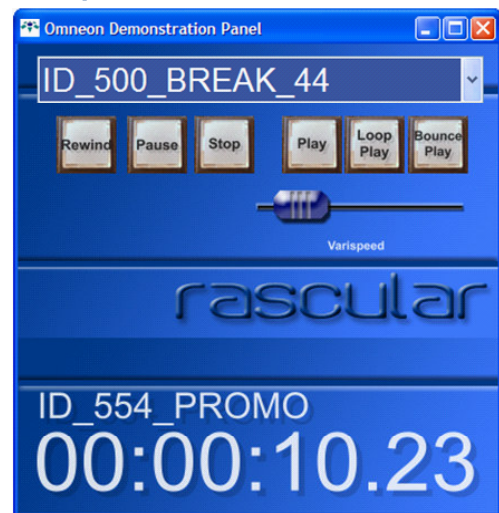

Typical applications for Helm with Omneon servers include:

- Master Control
- Emergency Playout Control
- Playout Monitoring.

Features

- Display of clip directory for clip selection
- Clip loading
- User-customisable transport controls
- Looped playback
- Bounce playback
- Varispeed playback
- Real-time display of timecode
- Real-time display of current clip ID
- Change of clip can trigger a Helm script

Example Omneon Control Panel:

Example panels showing Helm control of Omneon servers are available on our website at www.rascular.com.

Helm-Omneon Technical Information	
Compatibility	Omneon Spectrum and MediaDeck systems are supported. Helm-Omneon requires Helm software V2.32 or later.
Connection	Helm connects to the Omneon Media Director via Ethernet TCP/IP networking.

Ordering information Requires Helm-PC-Designer/Helm-PC to operate see data sheet for relevant application/drivers

Helm-Omneon	Helm-Omneon MediaPort licence - <i>required for each Mediaport controlled by Helm</i>
Helm-MediaDeck-SD	Helm-Omneon MediaDeck SD Licence - <i>required for each MediaDeck SD controlled by Helm</i>
Helm-MediaDeck-HD	Helm-Omneon MediaDeck HD Licence - <i>required for each Mediadeck HD controlled by Helm</i>
