

# ClockWork

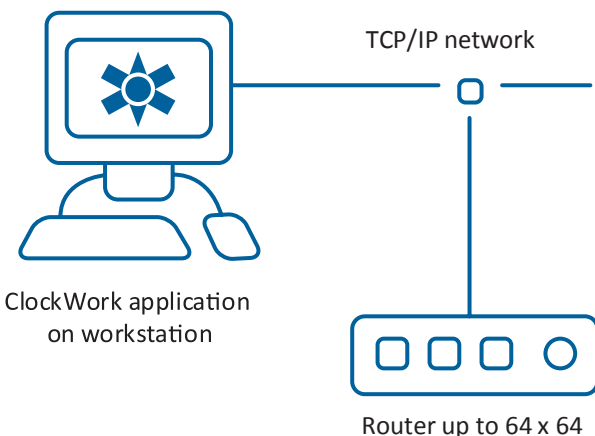

A stand-alone PC application for automated time-of-day and manual control of routers.

Designed to address the requirement for cost-effective router automation and manual control of small video/audio routers, ClockWork is simple to set up and intuitive to use, providing operators with precisely what they need.

## Features

- Router sizes up to 64 x 64
- Self-contained configuration
- Support of multiple router protocols
- Router control over TCP/IP or serial
- 8 router levels supported
- ClockWork Manager – shows the Events list and allows operators to create/select/edit Events
- Automatic daily and weekly repeats
- Event accuracy to within 1 second
- Manual control panel with arm/take operation
- Switches reflected in the control panel
- Controls for “Schedule Take At” and “Schedule Take In”
