## A standalone application for routing control of NDI® sources and destinations

RouteMaster-Lite is based on our powerful RouteMaster technology and is designed to provide comprehensive cost-effective router control for NDI® - NewTek's I/P protocol. With support for a maximum virtual router size of 20x20, RouteMaster-Lite is ideal for OB and production environments.

### Virtual NDI® router control

- Tightened functionality variant of RouteMaster
- NDI® Routing only
- Supports four control panels which can be a mix of 3rd party hardware panels and Web panels
- Maximum router size 20 x 20

To purchase or find out more, contact [sales@rascular.com](mailto:sales@rascular.com)

Routemaster-Lite works in three key ways to present operators in an NDI® environment with familiar, and therefore easy-to-use, router control interfaces:

- Virtualisation of the NDI® source and destination devices (the IP addresses) in the system making them sources and destinations on a virtual NDI® router.
- Allows full router source/destination control via a web panel or hardware control panel that will be familiar to operators.
- Supports up to four hardware or web-based control panels.

### Key Features

- PC application (Windows 7, 10 and Windows Server 201x)
- Maximum virtual router size 20 x 20 (NDI® sources/destinations)
- Web-based router control panels run under Safari, Chrome, Firefox on desktop and mobile devices

### Hardware Panels supported

- BlackMagic Videohub Smart Control
- BlackMagic Videohub Master Control
